Why is my code performing poorly?

Category: FAQ

There are a variety of reasons for poor code performance. The quickest way to determine the problem is to send an email to support@nas.nasa.gov with the following information:

- The location of your source code
- A test data case and expected results
- The job submission script

Your request will be acknowledged and routed to our code optimization specialists for resolution. Get more information on HECC code optmization services.
